

ANSH SIDANA

Sangaria, Rajasthan

+91-8233238038 | anshsidana0611@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Robotics and AI undergraduate skilled in building scalable full-stack applications, analytics pipelines, and AI systems. Proficient in Python, React, and Node.js, integrating modern LLMs and computer vision to solve real-world problems.

EDUCATION

Thapar Institute of Engineering & Technology

B.E. Robotics and Artificial Intelligence

2023 – 2027

Patiala, Punjab

EXPERIENCE

Software Development Project for Local Business | *React.js, JavaScript*

- Engineered a responsive front-end architecture using **React.js** and **JavaScript** for a commercial retailer, improving mobile rendering speeds by 35% and significantly enhancing digital presence.
- Developed an intelligent battery recommendation engine mapping 150+ vehicle models to compatible products, optimizing the user journey and reducing customer search time by 50%.
- Designed a structured digital catalog and streamlined navigation; collaborated with stakeholders to align software with operational needs, successfully driving increased online customer inquiries.

PROJECTS

CareerLens – AI Intelligence Platform | [GitHub](#) | *Python, NLP, Sentence Transformers, FAISS, FastAPI*

- Built an **NLP pipeline** for resume analysis, skill extraction, and structured job-market data processing.
- Implemented **Sentence Transformers**, **TF-IDF**, and **FAISS** for semantic resume-job matching and skill-gap identification.
- Integrated **PostgreSQL** and **FastAPI** to deliver LLM-powered recommendations via an interactive **React/Tailwind** dashboard.

Sales Analytics Dashboard | [GitHub](#) | *Python, MySQL, Power BI*

- Constructed a robust data pipeline processing 4,000+ orders across multiple dimensions using **Python** and **MySQL**.
- Designed a normalized relational schema with stringent validation protocols to guarantee high-fidelity reporting accuracy.
- Formulated 30+ advanced **SQL** queries and crafted an interactive **Power BI** dashboard to visualize regional KPIs and profitability.

Proximity Alert | [GitHub](#) | *React, Node.js, PostgreSQL*

- Created a live location-sharing application with secure session rooms and custom boundary notifications utilizing **React** and **Node.js**.
- Incorporated **Socket.IO** to enable low-latency coordinate tracking alongside **JWT authentication** for strict access control.
- Utilized **PostgreSQL** to manage spatial datasets efficiently and maintain reliable user states across concurrent active sessions.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, TypeScript, SQL

Frameworks & Tools: React.js, Node.js, Express.js, Git, Power BI, VS Code, FastAPI

Data & AI: Generative AI, NLP, Machine Learning, OpenCV, Pandas, NumPy, MySQL

Core CS: Data Structures & Algorithms, DBMS, OOP, REST APIs, Problem Solving

ACHIEVEMENTS

- Architected and deployed multiple full-stack, AI-driven, and data analytics applications.
- Demonstrated strong command of machine learning fundamentals, relational databases, and system design concepts.
- Member of the OWASP society, actively engaging in application security and development best practices.
